# Cloud Services

Due to its efficiency and accessibility, cloud computing is on the rise among businesses. The ability to leverage a nearly unlimited source of computing power, storage, platforms and software is invaluable for a company. The IT community has the capacity to manage distributed computing, virtualization and ubiquitous networking, enabling business to focus on other outcomes.

Data-Core has the access to global capabilities to provide an integrated approach to more effectively implement a cloud solution to address business challenges, with an emphasis on infrastructure capacity and scalability.

**Data-Core provides a variety of Cloud Services for various industries. Our offerings include:**

- Cloud Strategies
- Cloud Construction: private cloud architecture and setup, virtualization, business continuity planning and disaster recovery
- Cloud Migration Services: data and application migration, application and platform testing
- Cloud Managed Services
- Cloud Native Application Development

At Data-Core, we engage with our clients to holistically examine their business needs. Our Cloud IPs, assets, solutions and services are then tailored to meet those requirements. We deliver the key cloud benefits of business agility, adaptability and flexibility, in a robust and secure environment.

Incorporating the strategic transformation of processes, technologies and capabilities, Data-Core's approach ensures the optimal mix of enhanced agility, reduced total cost of ownership (TCO) and maximum return on investment (ROI). We use a highly structured approach to establish your business needs, assess the underlying technology components and then deploy the appropriate cloud computing components to deliver reduced costs, enhanced agility, quick service delivery and improved scalability.

## **Cloud computing provides the following benefits:**

- Standardized, IT-based capability provided by “off-the-shelf” or commoditized hardware components, use of large-scale virtualization beyond processors – storage, core applications and development platforms.
- Consumption-based billing on the basis of actual usage, and “pay-per-use” economics, for very small contract durations.
- Ability to “flex” and add capacity on the fly, with built-in “elasticity.”
- Flexible access models, such as web-based interfaces for administrative and usage needs.

Organizations are embracing the cloud to benefit from the scalability, responsiveness and cost-efficiencies that cloud computing offers. The transformation to a cloud environment is a significant enterprise undertaking that has a tremendous impact on the way IT organizations operate and the way services are delivered to business users.

Data-Core views cloud as a paradigm that allows organizations to operate more efficiently, while also further enabling a service-based IT delivery model, resulting in improved responsiveness to business needs.

We offer end-to-end cloud computing services with strategic consulting to further transform the way organizations leverage IT.
